

Introducing...

# Capran® Emblem™ Biax Nylon Films

## The Broadest Choice of High-Performance Films

Transilwrap is proud to present Honeywell's world-class line of biaxially oriented nylon films for packaging and other applications requiring outstanding strength, heat and barrier properties.

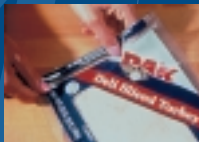

The biaxial orientation of Capran® Emblem™ films provides two major advantages. It improves the films' inherent flavor, aroma and gas barrier properties, and it also provides exceptional abrasion and puncture resistance at thinner gauges than competitive

Transilwrap offers four different grades to meet the demands of a wide range of end-use environments. Offered in 48, 60, and 100 gauge, they include the following:

- "M" coated films providing superior ink adhesion for printed applications.
- Metallized films combining outstanding optical and barrier properties.

- Uncoated films delivering superior flexcrack and impact strength, plus chemical resistance.
- PVDC-coated films, which maintain all these properties and also provide an excellent oxygen barrier for extended food shelf life.

Transilwrap's expert converting services run the gamut from precision slitting and perforation to pre-printing and corona treatment. Turnaround is fast, and technical support always available.

Capran® Emblem™ is the latest addition to Transilwrap's comprehensive family of films for food and industrial packaging, including the following:

- PVDC-coated polyester
- PVDC-coated polypropylene
- Heat-sealable polyester
- Cast polypropylene

For more information on Capran® Emblem™ and the Transilwrap family of high-performance films, return the attached card or call: (800) 659-4254 in the USA or (800) 268-4108 in Canada.
