

Transilwrap Company, Inc. was established in 1931. For more than 75 years we have gained experience in managing synthetic products through manufacturing, converting, and distributing these materials. As a global company policy we have empowered every member of our organization to function with a priority toward preserving our environment. Our practices include internal and external efforts to benefit the well being of our entire team, our customers, and the environment.

Internally we have implemented a series of recycling programs. Through our manufacturing, converting, and distribution operations:

- ✓ We reclaim most of our packaging materials including pallets, end boards, corrugated, paper and cores.
- ✓ Working in cooperation with our customers, we have significantly reduced the consumption of packaging materials.
- ✓ Scrap material generated through any of our processes is converted into a recycled format and consumed by other organizations in the plastic industry.
- ✓ We have implemented strategic shipping practices to minimize freight fuel consumption.
- ✓ We segregate and recycle bottles, cans, plastic bags, oils, inks and solvents.

Externally we are aggressively developing synthetic products from sustainable resources.

- ✓ Renewable resource resins to alleviate dependence on fossil fuel.
- ✓ Recycled resins for use in opaque product applications.
- ✓ Biodegradable resins that react with organic elements one disposed.

We are proud of our contributions to help preserve our environment. Should you have any questions, please contact us at (800) 321-8544.

Transilwrap's Environmentally Friendly Line of Plastics

Materials are available in:

Bio Styrene
Bio Transalloys
Bio ProPrint

ENVIRONMENTALLY FRIENDLY
BIODEGRADABLE
RECYCLABLE • NON-TOXIC
ASTM & ISO APPROVED
